INTRODUCING CONIPLAY...

The CONIPLAY outdoor system has been fully tested for a range of critical fall heights and will reduce the risk of injury.

With 22 standard colours in the range, designers have plenty of freedom and scope to create fun, stimulating and UV resistant playground surfaces. The technical properties of the CONIPLAY system, including wear and weather resistance, are retained for an extended period, and the full range of CONIPLAY surfaces are tested and comply with international standards.

PLAYGROUND SURFACING TO MINIMISE THE RISK OF INJURY.

*Children want to enjoy carefree play and need an inspiring play surface that offers safety and protection. CONICA's playground surfaces are not only **EN:1177** certified but are also always functionally and technically state of the art.*

The CONIPLAY system has been rigorously tested across a range of Critical Fall Heights:

22 STANDARD COLOURS

FLOORING WITH MINIMISED RISK OF INJURY

Thanks to CONIPLAY's particular nature, it cushions falls and thus reduces the risk of injury. The system can be installed to a number of different thicknesses depending on what the requirements of the play equipment are. Full technical information is available on request.

The mechanical properties of the surfaces are retained for an extended period, and the different types of flooring are tested and comply with international standards.

CONIPLAY is quick and easy to install and requires only minimal maintenance throughout the year, colours do not fade.

CONICA – FOR TOTAL PLAY AREA SOLUTIONS

CONIPLAY INDOOR –

an interior version of our CONIPLAY outdoor system that includes a sealer coat for hygiene purposes.

CONIPAVE –

a water-permeable, environmentally- friendly flooring system ideal for paths and roads, which is also suitable for golf courses, playgrounds, parks and tree-base protection.

CONIWALK –

a lighter version of CONIPAVE, perfect for pedestrian only areas.
